Introduction

SilverStone created the Primera PM02 tower chassis to further extend its mission of bringing rich feature set and trend-setting aesthetics into PC chassis designs. It has many modern features such as front USB Type-C connector, power supply / drive cover, convenient tool-less drive trays, and smart backside cable routing design.

The PM02 not only has highly flexible space for installing all popular core components, it also has incredible support for a myriad of cooling configurations. There are six total 120 / 140mm fan slots around the case with maximum radiator support of up to 360mm. True to SilverStone tradition, the PM02 also has excellent dust protection thanks to implementation of easily removable filters and positive pressure airflow setup. For those looking to get a case that can deliver cooling performance as good as it looks and want deeper personal customization, the PM02 is it!
